

Covington's Nursery Texas Native Plants

True Native:

A true Texas native plant is one that naturally occurs in nature. It's been part of the Texas environment for hundreds or thousands of years. They are adapted to the local climate and soil, making them well-suited for the local ecosystem.

Native Cultivar:

A Texas native cultivar is a plant that is indigenous but has been intentionally selected by humans for a desirable trait, such as unusual flower color, a more compact size, or disease resistance.
